

Netflix Titles Analysis Dashboard

Data Analysis Using Excel, Power BI, Power Query & DAX

Prepared By: Jitesh

Project Overview

Objective

The objective of this project was to analyze the Netflix Titles dataset and build an interactive Power BI dashboard to uncover valuable insights into Netflix's content library. The analysis focuses on content distribution, genres, ratings, countries, release years, and overall trends to support data-driven decision-making.

Dataset Information

- Source: Kaggle
- Dataset: Netflix Titles Dataset
- Tools Used: Microsoft Excel, Power BI, Power Query, DAX

Data Cleaning & Preparation

To ensure accurate analysis, the dataset was cleaned and transformed before visualization.

Data Cleaning Steps

- Imported the raw dataset into Excel and Power BI.
- Removed duplicate records.
- Handled missing and blank values.
- Corrected data types.
- Standardized text formatting.
- Converted date columns into the correct format.
- Performed data transformation using Power Query.
- Loaded the cleaned dataset into Power BI.

Outcome

A clean and structured dataset ready for analysis and dashboard development.

Dashboard Overview

The dashboard was designed to provide an interactive and user-friendly experience for exploring Netflix content.

Dashboard Features

- KPI Cards
- Movies vs TV Shows Analysis
- Genre Distribution
- Content Rating Analysis
- Country-wise Analysis
- Release Year Trends
- Interactive Filters and Slicers

Key Performance Indicators

The dashboard includes several KPIs to provide a quick overview of Netflix's content library.

- Total Netflix Titles
- Total Movies
- Total TV Shows
- Total Countries
- Total Genres
- Content Ratings
- Release Year Analysis

These KPIs help users understand the overall composition of the Netflix catalog.

Key Insights

The analysis revealed several important findings:

- Movies represent the majority of Netflix's content library.
- Netflix has significantly increased its content additions in recent years.
- Drama and Comedy are among the most popular genres.
- TV-MA and TV-14 are the most common content ratings.
- The United States contributes the highest number of titles available on Netflix.
- Interactive filters allow users to analyze data by country, genre, rating, and release year.

Skills Demonstrated

Data Preparation

- Data Cleaning
- Data Transformation
- Power Query

Data Analysis

- DAX Measures
- Data Modeling
- KPI Development

Data Visualization

- Interactive Dashboard Design
- KPI Cards
- Bar Charts

- **Pie Charts**
- **Line Charts**
- **Slicers and Filters**

Professional Skills

- **Data Analysis**
- **Business Intelligence**
- **Data Storytelling**
- **Problem Solving**
- **Insight Generation**

Conclusion

This project demonstrates the complete data analytics workflow, from cleaning raw data to designing an interactive Power BI dashboard.

Using Excel, Power Query, DAX, and Power BI, raw Netflix data was transformed into meaningful business insights. The dashboard enables users to explore trends in content type, genres, ratings, countries, and release years, helping support informed decision-making through data visualization.

Thank You
